

How to connect a chromebook to your home WiFi network.

Step 1. Power on the chromebook. If you are not within range of the NCS-Student WiFi you will see a screen like this

Step 2. Select your home WiFi network, it may not be the first one on the list depending on the signal strength

These are other networks, ignore these

This is your network, Select this one

Step 3. After selecting your network you'll be taken to a screen that looks like this, type the password in the corresponding box. If your not sure of the password for your router, typically the default password is located on a sticker somewhere on the device

Step 4. Click on Connect and you should be connected to the internet

Step 5. Log into your account as you would normally
